

B.TECH CSE • INTERNSHIP REPORT

Data Science Internship at SkillCraft Technology

14 July 2026 – 14 August 2026

RICHA KUMARI

Roll No. 25SCS1003005304 | Batch 2CSE14

Under the Guidance of Mr. Ramvath Ganesh

Internship Overview

This report presents the work carried out during a one-month internship undertaken with SkillCraft Technology as a Data Science Intern. It was completed as part of the practical training component of the B.Tech CSE curriculum, providing exposure to data handling, statistical analysis, and predictive modelling.

As the organisation's documentation consists of an offer letter and completion certificate rather than a task-wise log, this report focuses on the technical domain of the internship and presents an academic project that consolidates the concepts studied during the period.

1 Month

INTERNSHIP DURATION

Data Science

TRACK / DOMAIN

INTERNSHIP REFERENCE ID

Organization Profile

SkillCraft Technology is the organisation with which the internship was undertaken, as recorded in the offer letter (dated 13 July 2026) and the completion certificate (dated 26 August 2026).

The organisation offers structured internship programs to students, including a Data Science track, giving interns exposure to practical, hands-on work in the field.

Beyond the details stated in the offer letter and certificate, no further organisational information has been used in this report — in keeping with the requirement to avoid unverified claims about the organisation.

● ORGANISATION

SkillCraft Technology

● REFERENCE ID

SCT/JUL26/4530

● OFFER LETTER DATE

13 July 2026

● CERTIFICATE DATE

26 August 2026

Data Science

Problem Statement

Academic coursework in Data Science typically covers statistical and machine learning concepts in a largely theoretical manner, with limited opportunity to apply them to complete, end-to-end workflows.

THE GAP

A gap exists between classroom learning and the practical skills expected in a data science role — cleaning real-world datasets, performing exploratory analysis, building predictive models, and communicating findings clearly.

→ *Addressed by predicting customer churn from a structured dataset and deriving actionable insights.*

Project Objectives

1

Understand the end-to-end workflow of a typical data science project, from raw data to actionable insight.

2

Perform systematic data cleaning and preprocessing on a structured dataset.

3

Apply exploratory data analysis (EDA) to identify patterns, trends, and relationships.

4

Design and implement a machine learning model for customer churn prediction.

5

Evaluate model performance using standard classification metrics.

6

Visualise key findings using appropriate charts and summary tables.

7

Document the project workflow in a clear, reproducible, professional manner.

Scope of the Project

The project is scoped as an academic, self-contained case study — not a production deployment for SkillCraft Technology or its clients.

IN SCOPE

- ✓ Acquisition and inspection of a publicly available customer dataset
- ✓ Data cleaning, handling of missing values, and feature preparation
- ✓ Exploratory data analysis of customer behaviour and churn patterns
- ✓ Development of a classification model to predict churn likelihood
- ✓ Evaluation of the model and interpretation of results
- ✓ Presentation of findings through tables and visualisations

OUT OF SCOPE

No proprietary data, systems, or clients belonging to SkillCraft Technology are involved. No claims are made regarding deployment in a production or business environment.

The project is intended to be explainable and reproducible for academic evaluation.

Technologies and Tools Used

PROGRAMMING LANGUAGE

Python

Extensive ecosystem for analysis and ML

MACHINE LEARNING

Scikit-learn

Accessible, well-documented ML algorithms

DATA HANDLING

Pandas, NumPy

Efficient handling of tabular data & computation

DEVELOPMENT ENVIRONMENT

Jupyter / Google Colab

Interactive, step-by-step workflow

VISUALIZATION

Matplotlib, Seaborn

Standard libraries for statistical plots

VERSION CONTROL

Git and GitHub

Systematic tracking of code & project record

System Architecture

The project follows a linear data-processing pipeline, typical of a data science workflow:

Figure 4.1 — Proposed system architecture: data flow from raw input to output

Methodology

- 
- 1 Requirement Understanding** reviewing the internship domain, defining academic scope
 - 2 Data Acquisition** selecting a suitable public dataset relevant to customer churn
 - 3 Data Cleaning & Preprocessing** handling missing values, duplicates, inconsistencies
 - 4 Exploratory Data Analysis** examining distributions, correlations, churn patterns
 - 5 Model Development** training a classification model on the prepared dataset
 - 6 Model Evaluation** assessing performance using standard classification metrics
 - 7 Documentation** recording workflow, code, and findings reproducibly

Expected Outcomes

Verified Internship Info

- Successful completion of a one-month Data Science internship at SkillCraft Technology (14 Jul – 14 Aug 2026), confirmed by offer letter and completion certificate (ID: SCT/JUL26/4530).

Academic / Prototype

- A cleaned, validated dataset prepared as a student exercise.
- Exploratory visualisations highlighting churn patterns.
- A working prototype classification model, evaluated on standard metrics — for academic demonstration, not deployed.

Proposed / Future Work

- Extending the model with additional feature engineering and cross-algorithm comparison.
- Packaging the analysis as an interactive dashboard.

Certificate & Communication Proof

The Internship Completion Certificate issued by SkillCraft Technology confirms the internship role, duration, and terms of engagement, referencing internship ID SCT/JUL26/4530 on both the offer letter and certificate.

SkillCraft Technology's documentation did not include a task-wise evaluation record, grading matrix, or individually linked proof URLs. Accordingly, this report does not present any fabricated task list, mentor remarks, or proof links beyond the offer letter and certificate.

Academic project work is presented explicitly as student-developed, academic/prototype work — not as organisation-verified deliverables.

Thank You

Data Science Internship at SkillCraft Technology | 14 July – 14 August 2026
